

Hydraulic accessories for fountains

DIFFUSER FOR FOUNTAINS

AISI304 AISI316 MADE IN ITALY

- Made of AISI304 stainless steel (AISI316 on request)
- Small dimensions
- Different measures on request

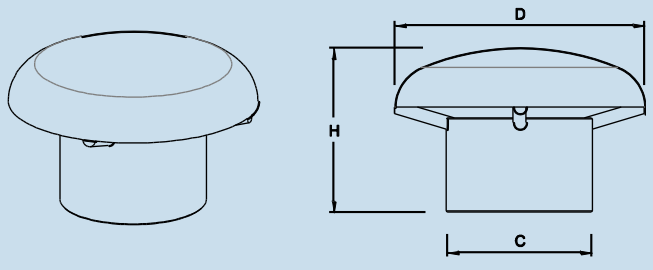

The diffuser for fountains is made of AISI304 stainless steel and it is used to damp water pressure in the injection point inside the tank, making the water effect more stable and uniform. This makes it particularly useful and recommended to supply overflow and waterfall fountain effects without turbulence, where the amount of water used is plentiful and the use of other devices would not be recommended.

Used under the head of water.

On request, it can be made of AISI316 stainless steel and in different dimensions.
