SPIRALE

100% METAL | PLASTIC FREE | INFINITE LIFETIME | MADE IN ITALY

- Made of stainless steel and brass
- Growing spiral of crystalline water jets
- 21 or 36 water jets
- Independent from the water level

The Spirale fountain nozzle is made of stainless steel and brass and it is independent from the water level.

It consists of a stainless steel manifold with supports on which are distributed 20 or 35 crystalline Cometa ø 4 mm jets and a central jet of type Cometa Plus ø 12 mm, all complete with pillars and flow stabilizers and regulators.

The jets are distributed in composition to create a growing spiral.

TIPS FOR USE AND APPLICATIONS

The Spirale nozzle, compared to a similar system obtained with individual jets, has the advantage of providing a water jets composition already calibrated, prearranged, with already balanced flow rates and already set water levels.

The nozzles disposition on manifolds already arranged and the single central inlet allow to greatly simplify the system and the installation.

Thanks to its small dimensions, this nozzle has the main advantage of producing a spiral effect in a very limited space.

Ideal for small and medium size basins (see the PREASSEMBLED FOUNTAINS WITH TANK section).

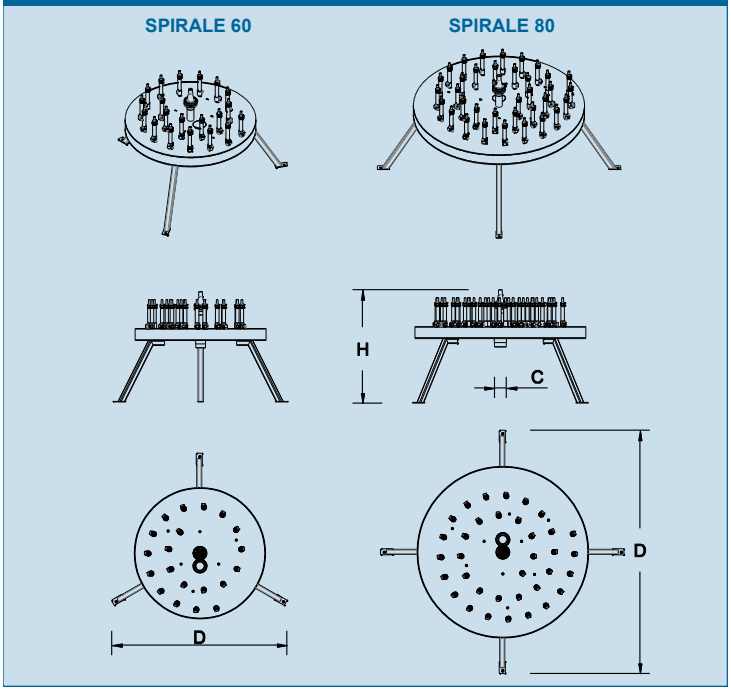

When necessary, the flow regulator under each nozzle allow to change the geometry of the water effect.

Requiring a small flow rate, if necessary this nozzle can be supplied with a low voltage submersible fountain pump, simplifying even more the system and the installation.

Underwater lighting: to enhance the water effect with monochrome or RGBW lighting features we recommend the use of the Mizar underwater LED fountain lights, professional products specific for fountain illumination, of refined design, cutting-edge technology and amazing lighting outcomes.
